

Job Operations and Production System

The power of information

At BDO Seidman, LLP, we understand the information needs of custom manufacturers and project-oriented service organizations. Because we are committed to providing both the production management and financial reporting capabilities you require, we developed JOB♦OPS job operations and production system, using the award-winning MAS 90® financial solution as the basis for a tailored custom manufacturing system. The JOB♦OPS product is designed with custom crafters and project-oriented service organizations in mind.

With Extensive Manufacturing Features

"JOB♦OPS manages my inventory dynamically and allows me to design custom assemblies out of various raw materials. Thanks to JOB♦OPS' incredible accuracy, my operating costs have been significantly reduced!"

*Bob Downs
MIS Manager, C.C. Sharrow*

JOB♦OPS helps you track real-time labor, materials, purchases and other costs associated with your jobs, all while monitoring each job's status through the production process. It combines the features of job costing, bill of materials and manufacturing systems in one powerful, cohesive module that helps you manage resources effectively and monitor costs.

Time Tracking

With Time Tracker, an add-on module for JOB♦OPS, you can add shop floor data entry capabilities to JOB♦OPS. Time Tracker offers interactive time clock functionality that can be used directly from the shop floor or in a batch data entry mode to record labor. Time is captured and applied to work tickets on a daily basis. The time is then held in a file for updating to payroll and for calculation and smoothing of overtime costs to jobs at the end of each week. Time Tracker also allows for bar code support with single-swipe keyless entry.

JOB ♦ OPS' broad range of features can help you to:

- Manage jobs and projects
- Supervise your labor force
- Oversee purchasing
- Maintain inventory
- Assess the results

You'll be backed by a combination of trained local consultants and the BDO Seidman National JOB ♦ OPS Service Center. Support for the JOB ♦ OPS solution includes such services as on-site systems consulting, installation, hands-on training, telephone support and customization services.

Award-winning Operational and Financial Applications

JOB ♦ OPS integrates seamlessly with Sage Software's award-winning MAS 90 accounting software. With top-notch accounting functionality and easy-to-use graphical interface, MAS 90 addresses your ever-widening range of business needs. The Sales Order Processing module tracks information on components, labor and outside services. Work tickets are generated from within Sales Order to start each project under way. JOB ♦ OPS can instantly record demand against inventory as each job is established, providing rapid feedback on inventory levels. Parts, labor and purchase order activities are captured dynamically in the Sales Order module for ready access to each order's production status.

Operating in the Microsoft Windows 95®, Windows NT and UNIX operating environments, with a host of customization capabilities, our JOB ♦ OPS solution provides flexibility for growth and change within your business. With the industry-standard Seagate Crystal Reports™ and FRx™ graphical financial and operational report writers and integration to Microsoft Office® available at the push of a button, the JOB ♦ OPS system can allow easy and meaningful access to your information. With an integrated JOB ♦ OPS and MAS 90 system, we can help your company begin to realize the benefits of higher profitability and productivity,

Scheduling and Capacity Planning

"JOB ♦ OPS is the best, no-nonsense scheduling tool that I have used. The program has helped us level our capacity easily, plan our process flow, and inform the floor of what is in the queue. Because of JOB ♦ OPS, we've been able to keep our inventory levels low and purchase using proper 'just-in-time' techniques. We gladly recommend JOB ♦ OPS to other manufacturers."

Kevin L. Haeg
Harbinger Industries

The optional JOB ♦ OPS Scheduling module provides a greater level of production schedule control, helping you to assess work in your queue and determine what can actually be completed, to manage your production capacity proactively. Finite and infinite capacity planning models are supported in addition to forward and reverse scheduling and batch schedule generation.

The JOB ♦ OPS Scheduling Control Hub can allow you to view work center capacity and scheduled work tickets, then dynamically modify schedules to make effective use of precious resources. Once a work center's availability is displayed, you can "drill down" to the work ticket schedules and adjust them as necessary.

improved job control and enhanced customer service.
