MAS 90 and MAS 200 Web Services Can Save You Time and Money!

At Sage, we are committed to adapting our software to take advantage of new technologies. The Internet, in particular, provides unprecedented opportunities for our customers. To that end, we've integrated several Web resources directly into our MAS 90 and MAS 200 product lines. By taking advantage of the combined power of the Web with MAS 90 or MAS 200, you can make your business more streamlined, more productive and more profitable.

The following Web services will be available with MAS 90 and MAS 200 levels 3.5, and are just the beginning in integrating the application with the Web. You can expect to see additional services added in future software releases:

iShip.com

Available from Invoice History and e-Business Manager, iShip.com gives you powerful, Web-based shipping tools that allow you to not only track packages, but also compare prices and choose the best carrier.

MapQuest

MapQuest is a leading provider of online maps. Directions to your customers' and vendors' physical locations are accessible by simply clicking on the map icon within Customer and Vendor Maintenance.

CreditFYI

Set credit limits and terms for new customers almost instantly with business credit reports from CreditFYI. Reports are accessible within Customer Maintenance and are substantially faster to obtain, easier to understand and, at less than \$15, aren't as expensive as traditional credit reports.

Sage Online Customer Services (SOCS)

SOCS is readily available from within the online help of each MAS 90 and MAS 200 application. You'll find it's extremely useful for finding technical information and downloading program changes and tax table updates.
